LASOS® DPSS laser series

Single frequency diode-pumped solid state laser modules
LASOS® DPSS laser series

The LASOS® DPSS laser series is the best choice when reliability and long lifetime matters. The special optical design and an intelligent power and temperature control guarantee:
- Excellent long-term stability
- Low noise
- Exceptional good beam quality
- Long lifetime

These characteristics are ideal for a variety of applications as in DNA sequencing, flow cytometry, digital imaging, analytical chemistry, fast-flow-rate particle measurements or confocal microscopy. Since all laser models emit only a single longitudinal mode they are also an ideal choice for application in Raman spectroscopy. Housed in compact and robust packages, these lasers are the perfect choice for design in and integration into OEM instrumentation and systems and also for end user applications in research and development. The lasers will be provided as self-contained laser modules, as OEM-component modules or as fully integratable subsystems, with a compact controller as OEM or stand alone version with computer interfacing.

Customized solutions for specific applications are possible. All laser models can be provided with polarization maintaining, adjustment free fiber coupling.

For enquiries specify:
Model key   Wavelength (last two digits) Output power (mW) TS
(Example for GLK 532 nm with 50 mW output power: GLK 3250 TS)

1) Longitudinal multimode operation
2) Output power available for different wavelengths (see figure to the right)
3) Allan Deviation for sample period < 0.5 s
